Ref: Consultation workshop on the draft scenario framework for the German Network Development Plan Gas 2020-2030

Dear Sirs/ Madam,

We would like to express our opinion and formal stance with reference to FNB consultation on the draft scenario framework for the German Network Development Plan Gas 2020-2030 regarding the Development of capacity demand at the Wallbach interconnection point in the direction of Switzerland and Italy.

Enet Energy SA is one Swiss independent commodity house based in Lugano, specialized in natural gas supply and trading on EU markets. Our main positions are in Italy, Germany, Netherlands, France and Austria. Combined, we delivered natural gas in excess of 50 TWh in 2018. The company is also active in the management of storage and transportation contractual assets and is one of the main suppliers of Italian municipalities. The managers and owners have 20 years of experience in the gas sector in the EU each.

We would like to submit our opinion based on technical analytical and administrative-operational grounds.

Regarding the point 7.4 of the consultation, we agree with the result of the analysis and the recommendation of the working group of the TSOs, therefore we strongly believe that it is necessary to increase the exit capacity at Wallbach from the actual 13.3 GWh/h to 16.2 GWh/h.

We remain available for further discussions.

Best regards,

ENET Energy SA
